EVERY SUCCESSFUL **JOURNEY**

STARTS WITH A **FIRST STEP**

The ideal **base coat** for any **residential or commercial** floor, First Coat provides a **high quality build**. This waterborne sealer dries faster, penetrates deeper and has a very high **solid** content.

First Coat is a protective **ceramic fortified sealer**. It is the perfect **foundation** for any of our **waterborne** finishes.

Mineral Hardness Comparison

Diamond	8000-8500	
Ceramic	4500-4600	Arboritec's advanced fortifying mineral
Aluminum Oxide	1800-2200	The primary fortifying mineral used on prefinished floors.

Knoop Hardness Test values

CONTENT	Polyurethane/Acrylic dispersion
SOLIDS BY VOLUME	~ 40%
SPECIAL FEATURE	Ceramic Fortified
VOC	Max 100g/L
RECOMMENDED USE	Sealer for Arboritec waterborne finishes.
COVERAGE	400-500 ft² per gallon
DRYING TIME	20-60 min.

Visit www.arboritec.com/products for complete floor and finish preparation procedures, application instructions, and MSDS for **First Coat**.

THE FUTURE IS **BRIGHT**

OUR **STRONGEST** FINISH INSTANTLY CURED WITH UV LIGHT

UVElite is designed for **high traffic** commercial and residential environments. This **instant cure** solution delivers the strongest, most durable, eco-friendly floors with **minimal interruption**.

Instant **Access**

As soon as UVElite is **cured** with a portable UV light, the floor is **ready** for high traffic, minimizing **Early Use Damage**.

Versatility

A wise choice for busy **commercial** job sites and **active households** with a **variety** of flooring surfaces. UVElite can be used on both **hardwood** and **resilient** floors to provide unrivaled durability, **protection** and ease of maintenance.

CONTENT	Waterborne UV cured polyurethane dispersion	
SOLIDS BY VOLUME	~ 32%

CHEMICAL RESISTANCE Immediately resistant to grease, water and regular household cleaners and detergents.

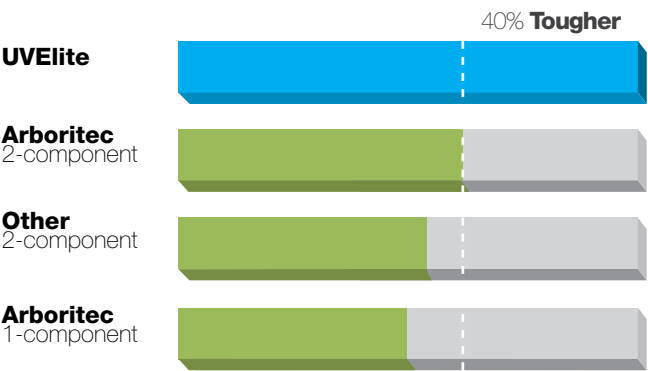

COVERAGE 500-600 ft² per gallon
READY FOR FULL USE Immediately after UV curing

Visit www.arboritec.com/products for complete floor and finish preparation procedures, application instructions, and MSDS for **UVElite**.

BENEFITS OF UVElite

The New Durability Standard

Market Leading Protection

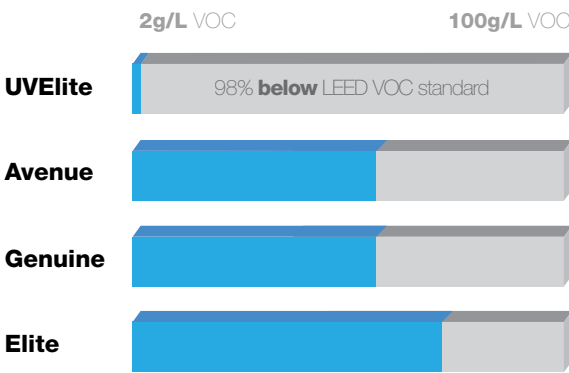

UVElite is over **40% more durable** than most market leading 2-component finishes.

UVElite minimizes early-use damage to recently finished floors. It is instantly cured with **ultraviolet light** from a portable UV machine. UV light **reacts** the **photoinitiators** within the coating, causing them to **instantly bond** and complete the curing process.

Setting Indoor Air Quality Standards

Leadership in Energy and Environmental Design (LEED) guidelines are the **standard** for **Indoor Air Quality**.

UVElite has **extremely low** volatile organic compound (**VOC**) levels and is **free** from **NMP** and isocyanates, found in several competing products. In fact, UVElite contains **less** than **2% of the allowable** VOC levels set by some of the strictest air quality standard organizations worldwide. Given this, UVElite is one of **the most sustainable** solutions on the market for protecting floors.

Next Generation Restoration & Maintenance Resilient Flooring

UVElite quickly **restores** the durability of factory-applied finishes, **eliminating** the need to replace the floor prematurely. Maintenance procedures and **chemicals** can be **reduced** while extending the **life** of the floor.

EASE OF USE

UVElite **flows** and **levels** well and has superior **open time** for extended workability. Unlike 2-component finishes, there are **no pot-life** or product **waste issues** to worry about.

UVElite Application Process

Before you get started, **take surface moisture readings** using a **pinless moisture meter** and note these background values.

STEP 1	STEP 2	STEP 3
Apply Base Coat	Apply UVElite	Cure with a portable UV machine
DRY TIME Allow background moisture levels to return to original value	DRY TIME Allow background moisture levels to return to original value	FLOOR IS READY FOR USE

COMMERCIAL CASE STUDY

Modern retailing requires solutions that **minimize** commercial downtime.

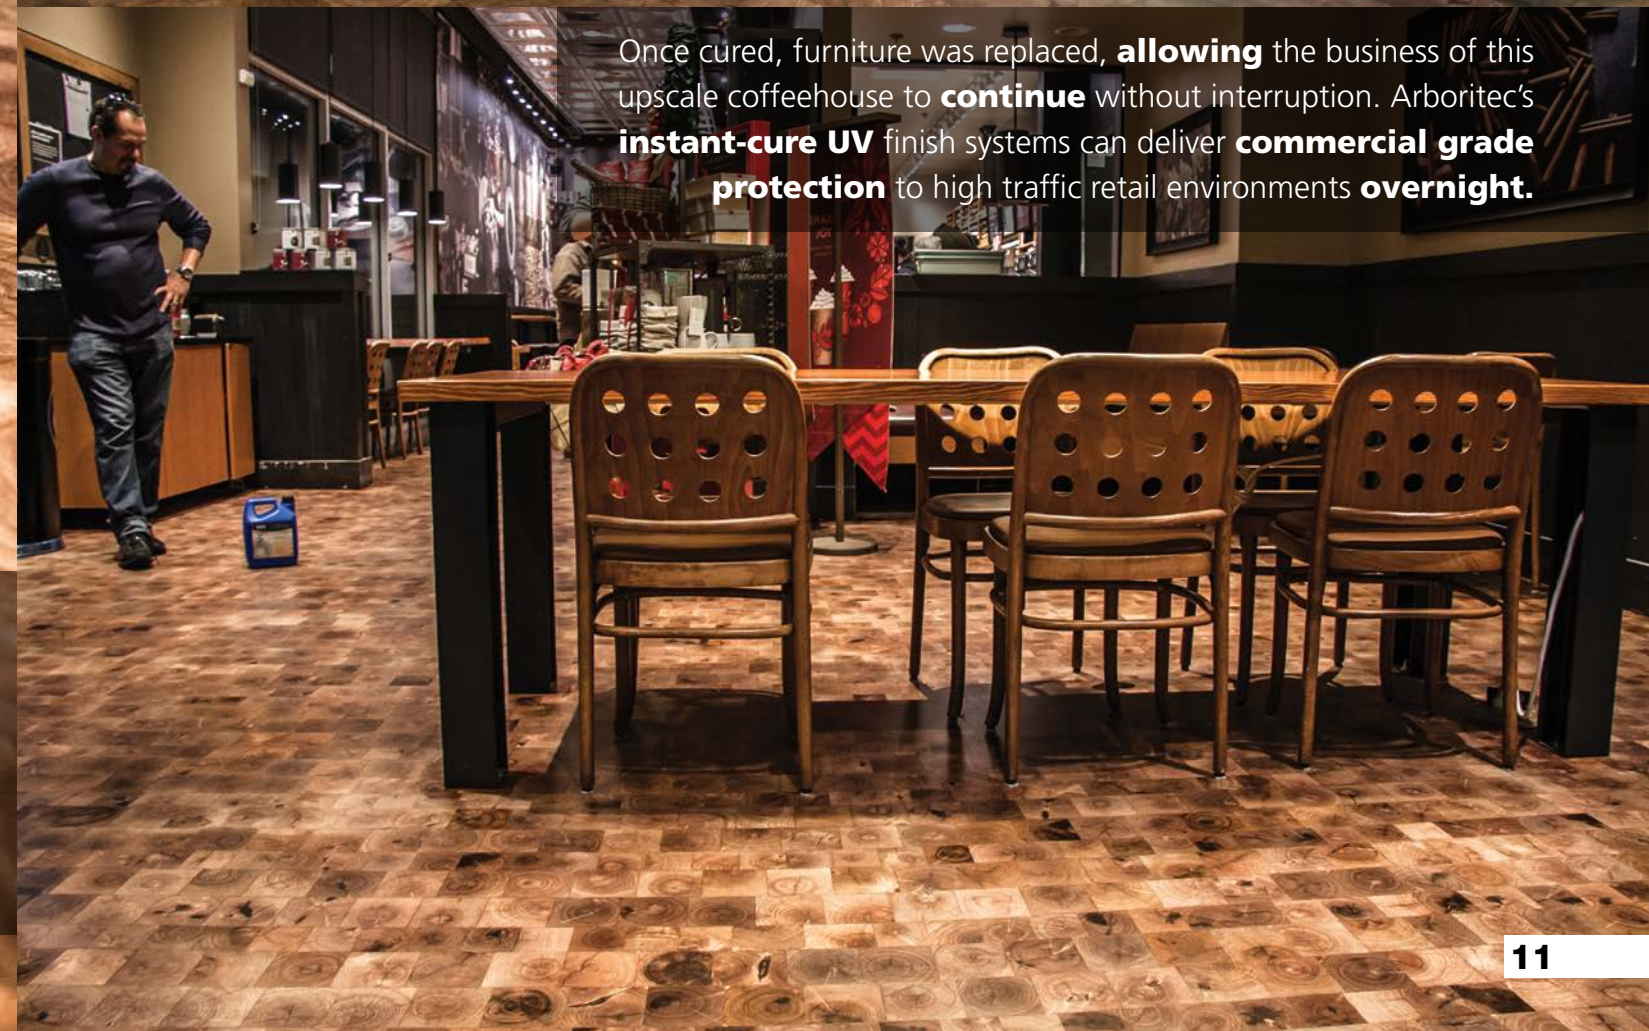

UVElite

A **busy** coffeehouse in Pleasanton, CA added **beauty** and **protection** to their wood floors **without** turning away a single customer. This challenge was met using Arboritec's **penetrating** oil finish, **Miracle Oil**, in conjunction with **UVElite** ceramic fortified and **instantly** cured finish.

This beautiful and unique floor was created from **individual** end-grain mesquite blocks. After **sanding**, the floor was screened, vacuumed and tacked. **Miracle Oil** penetrating finish was applied to bring the **rich tones** of the **end-grain** mesquite **to life** and add an **initial layer of protection**. Next, **Avenue**, was applied to provide the **optimal chemical bond** between the penetrating oil finish and **UVElite top-coats**.

After Avenue, **two coats** of **UVElite** were applied. Due to the **quick drying** characteristics of Arboritec waterborne finishes, the **total time** to apply this commercial system was only **four hours**. After moisture levels had returned to acceptable limits, the floor was **cured** with a portable UV light.

Once cured, furniture was replaced, **allowing** the business of this upscale coffeehouse to **continue** without interruption. Arboritec's **instant-cure UV** finish systems can deliver **commercial grade protection** to high traffic retail environments **overnight**.

POWERFUL PROTECTION

FOR **DEMANDING** ENVIRONMENTS

Avenue and Genuine set the **durability standard** for 2-component waterborne finishes. These products provide **advanced protection** in **high traffic** commercial settings and **active households**.

Avenue

The **flagship** of Arboritec's traditional wood floor finishes. **Exceptional protection** and **adhesion** on all surfaces: new, resanded and engineered. Designed for **high-traffic** environments.

Genuine

Arboritec's ultra matte **premium** finish. Genuine emphasizes the **natural beauty** of any **wood surface** and is ideal for **commercial and residential** floors where **the look** of a natural wood is desired.

CUSTOM COLOR

Miracle Oil is a **2-component** penetrating oil finish for wood floors designed to withstand **heavy** wear and tear. It **dries fast** and brings out the **natural grain** of the wood. **Miracle Oil is unique**, because it can be **top-coated** with any Arboritec 2-component waterborne **finish** for **added protection**.

- **Quick** and **easy** to apply
- **More durable** and scratch resistant than traditional solvent-based stains
- **Top-coatable** with any Arboritec 2-component waterborne finish
- **Easy** maintenance
- **Based on** rich, natural linseed oil
- **100% solid**, solvent free
- **Zero** VOC

These **seven base colors** are only the starting point for all available color options. Unleash your **creative** side by combining colors and different wood species.

BLACK GRAY WHITE NATURAL BROWN RED-BROWN RED-MAHOGANY

RESIDENTIAL CASE STUDY

Miracle Oil

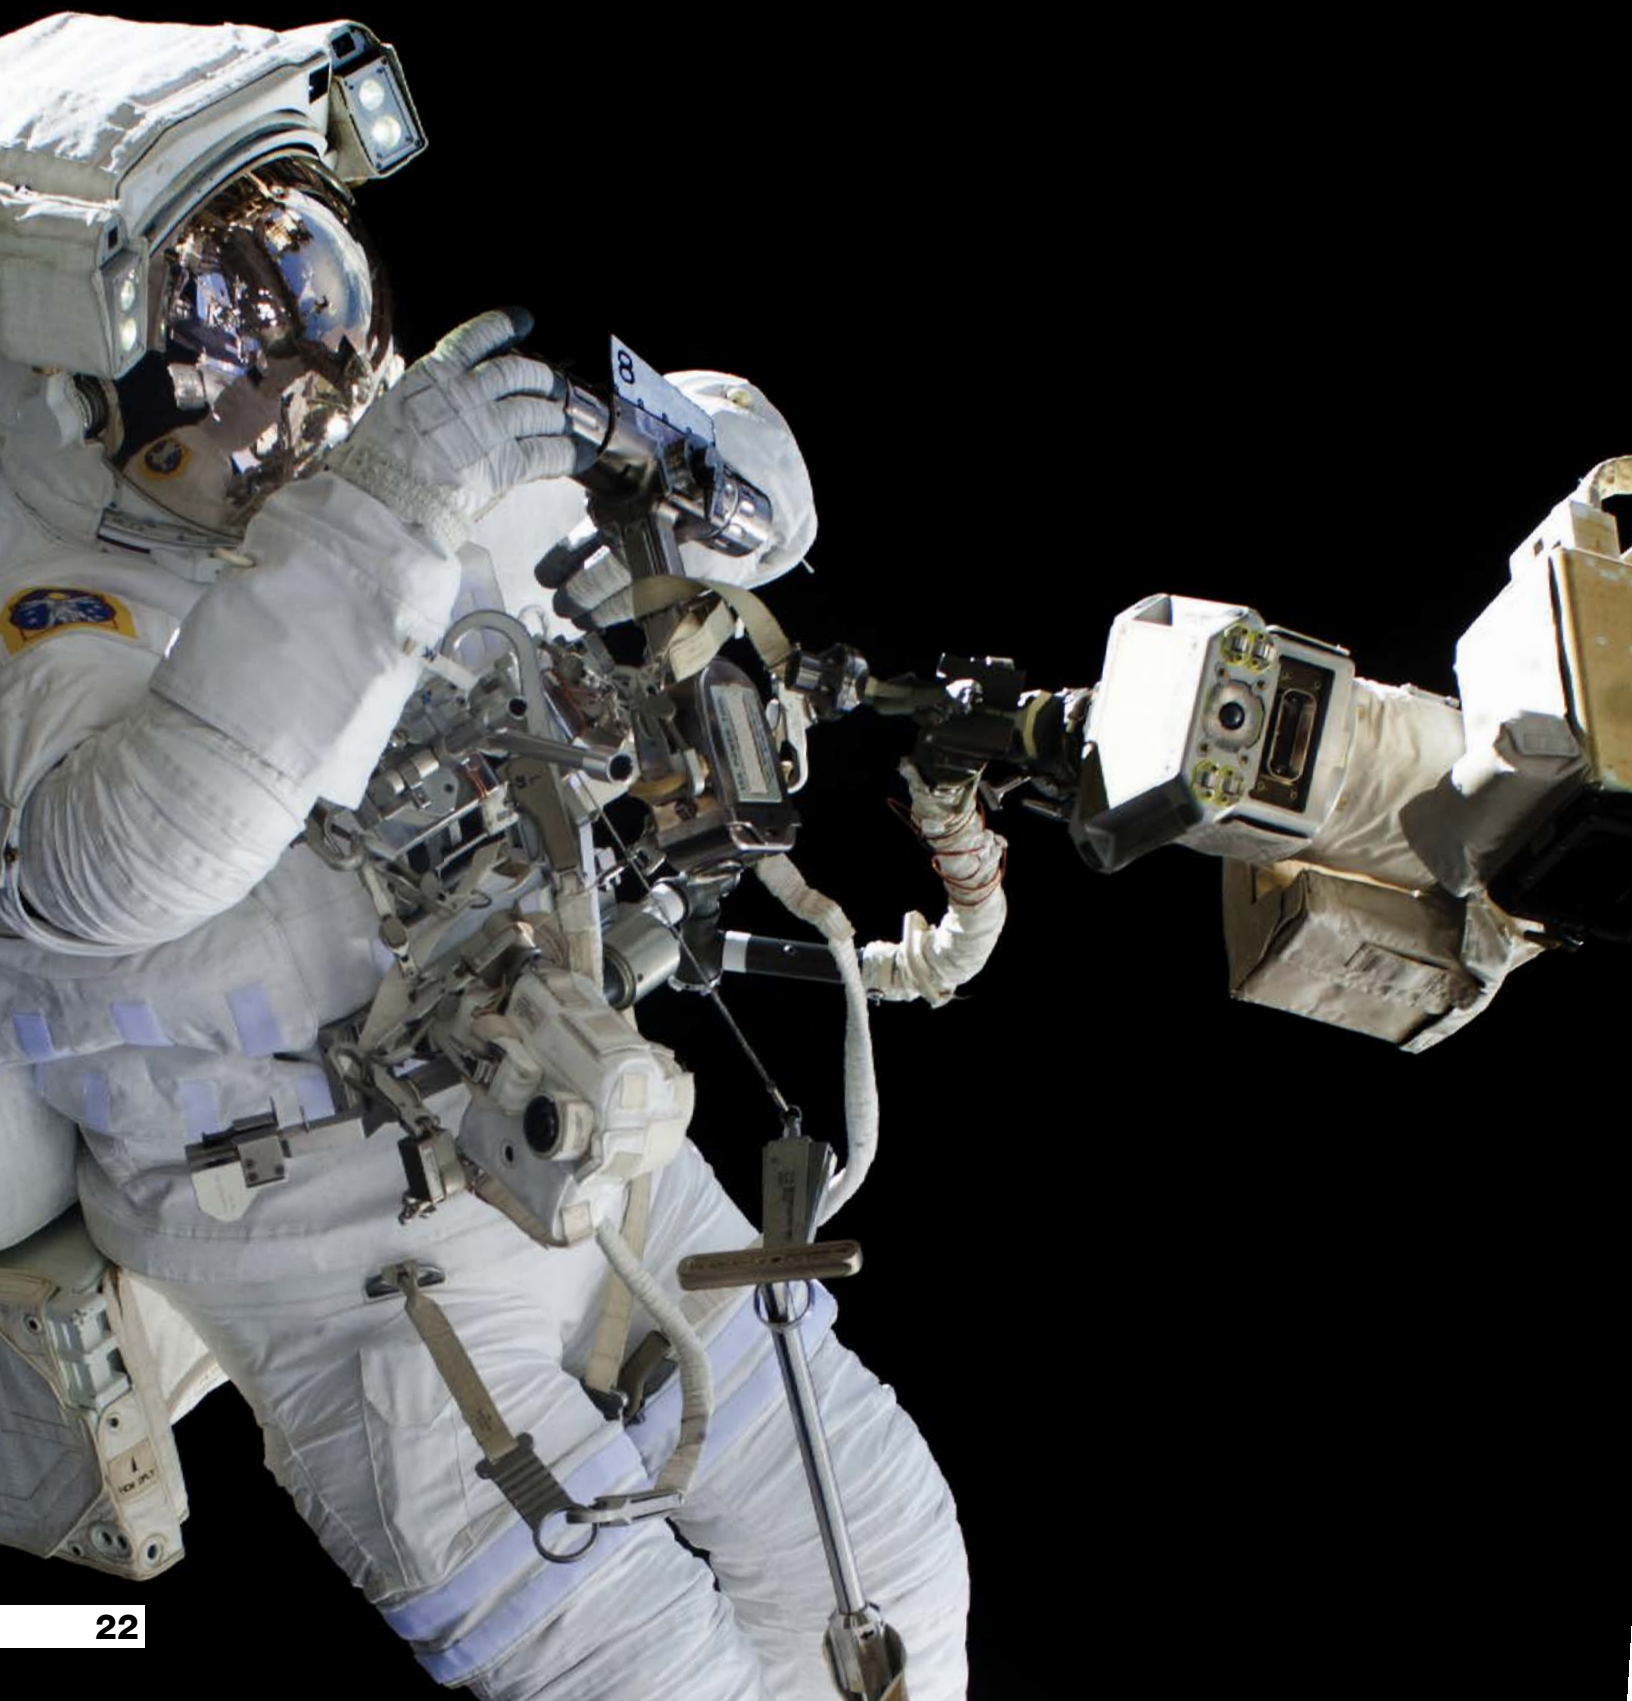

When the **Mazurek's** purchased their home they decided to **redefine** it truly as their own. They saw the potential to quickly make their new home more comfortable and **suited** to their needs with a few changes to walls, wood floors and the kitchen.

The Mazurek's are an **"active household"** - full of comings and goings, impromptu social events, two sport-focused teenage boys, an energetic daughter and a sizable friendly dog. Given the level of activity, their floors needed to be able to withstand fairly demanding use.

Arboritec was able to address their **true** needs and help them achieve a floor they could call their own. After sanding, **white Miracle Oil** was applied on the existing oak floors, **brightening up** the grain and giving the wood **added character**. Miracle Oil helped completely **transform** their entire home with feel, **simplicity**, elegance, and European-styling of an oiled floor. It will also **protect** their floors from potential damage from their **active household** for years to come.

Review Arboritec's manufacturer recommended **floor coating systems** on page 29 for **additional** creative uses of Miracle Oil.

MAINTENANCE SOLUTIONS

NEXT GENERATION

RESTORATION & MAINTENANCE FOR **RESILIENT FLOORS**

UVElite

UVElite can **quickly restore** the factory-applied finish on **resilient** floors. Building owners report **increased floor longevity** and **reduced maintenance costs**. There is no need for frequent scrubbing of the floor or **use of strong** cleaning agents. A recent **study** at St. Catherine's School in Sweden concluded that their UVElite coated **PVC floor** absorbed **50% less dirt** and was **80% easier to clean** than conventional, temporary solutions like polish and wax.

DAILY MAINTENANCE

Arboritec **Wood Floor Cleaner** has been crafted to provide the ultimate in floor care on all **wood and resilient** floors.

- **Solvent free** - Safe for the environment
- **Removes tough to clean** dirt and spills
- **Dries fast** without leaving any streaks and haze
- **Safe** for children and pets
- **No harmful** odors or toxins
- **Ready-to-use** and does not need to be diluted
- **Available in:**
 - 32 oz. spray bottle
 - 1 gallon refill
 - 1 quart (liter) refill
 - Wood Floor Care Kit incl. 32 oz. spray bottle
 - Spray Mop Kits incl. 1 quart (liter) liter refill
- **Not for use on** waxed floors

Recommended Cleaning Procedure

For **daily maintenance** simply follow a **two-step** procedure of first removing all dirt and dust and then cleaning the floor with Arboritec Wood Floor Cleaner.

Dry - Remove Dirt and Dust

Before using Arboritec Wood Floor Cleaner it is important to remove all dirt and dust which might scratch the surface. Daily cleaning of wood floors should begin by using dry cleaning methods, e.g. dry mopping or vacuuming the floor without the use of rotating brushes. Walk-off mats are recommended in doorways for preventative maintenance to keep out dirt and grit. Natural rubber walk-off mats are recommended over synthetic rubber to minimize any risk of stain.

Wet - Clean the Floor

After removing the dirt and dust, spray Arboritec Wood Floor Cleaner directly onto the floor and disperse using a micro fiber mop. Alternately, microfiber pads may be moistened directly and then used to spread the cleaner in a thin layer onto your floor. It is best to not oversaturate the floor with water, as excessive water can damage wood floors over time. Spot clean heavy traffic areas to remove isolated heel marks, scuffs and spills.

PERIODIC MAINTENANCE

Use **Refresher** for **occasional** maintenance on polyurethane finished wood floors. Refresher **adds** an extra **layer of protection** to high-traffic areas that have become worn.

Use **Satin Oil** for intermittent maintenance on **oiled floors** to **shield** from **wear** and bring back the **luster** of a newly oiled floor. Satin Oil is an oxidative-hardened **maintenance** oil for **deep cleaning** all oiled wood floors.

Visit www.arboritec.com/products for complete floor and finish preparation procedures, application instructions, and MSDS for **maintenance products**.

ARBORITEC **RECOMMENDED** SYSTEMS

COMMERCIAL SYSTEMS

Arboritec **recommended** systems provided here have been thoroughly tested and are **designed** to deliver consistently reliable results. Our staff consults **directly** with flooring professionals to **advise** them on how our advanced coating technologies can be used to solve a variety of durability challenges.
